

Please amend the claims as follows:

1. (Currently Amended) A powder slurry curable thermally and with actinic radiation and comprising highly viscous and/or solid particles dimensionally stable under storage and application conditions, comprising
 - (A) at least one binder free of carbon-carbon double bonds activatable with actinic radiation, comprising at least one (meth)acrylate copolymer containing on average per molecule at least one isocyanate-reactive functional group and at least one ion-forming group,
 - (B) at least one blocked and/or part-blocked polyisocyanate, and
 - (C) at least one olefinically unsaturated constituent which is free of isocyanate-reactive functional groups and contains on average per molecule at least one isocyanate group blocked with at least one of pyrazole or with at least one substituted pyrazole and at least two carbon-carbon double bonds which can be activated with actinic radiation, ~~preparable~~prepared by reacting at least one polyisocyanate with at least one of pyrazole and/or with at least one substituted pyrazole and also with at least one compound containing an isocyanate-reactive functional group and at least two carbon-carbon double bonds activatable with actinic radiation.
2. (Original) The powder slurry as claimed in claim 1, wherein the binder (A) has a glass transition temperature of from +5 to +25°C
3. (Currently Amended) The powder slurry as claimed in claim 1 or 2, wherein the isocyanate-reactive groups are selected from the group consisting of hydroxyl, thiol, and primary and secondary amino groups.
4. (Original) The powder slurry as claimed in any of claims 1 to 3, wherein the isocyanate-reactive groups are hydroxyl groups.
5. (Original) The powder slurry as claimed in any of claims 1 to 4, wherein the substituted pyrazole is a dialkylpyrazole.

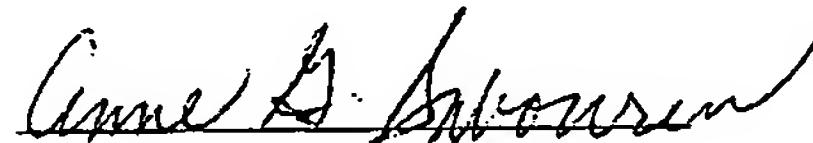

6. (Currently Amended) The powder slurry as claimed in claim 5, wherein the dialkylpyrazole is 3,5-dimethylpyrazole.
7. (Currently Amended) The powder slurry as claimed in ~~any of claims 1 to 6~~claim 1, wherein the constituents (C) contain hydrophilic groups.
8. (Currently Amended) The powder slurry as claimed in ~~any of claims 1 to 7~~claim 1, wherein the carbon-carbon double bonds are ~~present in~~provided by at least one of (meth)acryloyl, ethacryloyl, crotonate, cinnamate, vinyl ether, vinyl ester, ethenylarylene, dicyclopentadienyl, norbornenyl, isoprenyl, isopropenyl, allyl or butenyl groups; ethenylarylene ether, dicyclopentadienyl ether, norbornenyl ether, isoprenyl ether, isopropenyl ether, allyl ether or butenyl ether groups; or ethenylarylene ester, dicyclopentadienyl ester, norbornenyl ester, isoprenyl ester, isopropenyl ester, allyl ester or butenyl ester groups.
9. (Currently Amended) The powder slurry as claimed in claim 8, wherein the carbon-carbon double bonds are ~~present in~~provided by (meth)acryloyl groups.
10. (Currently Amended) ~~The use of the A composition comprising the~~ powder slurry as claimed in ~~any of claims 1 to 9~~ as a selected from the group consisting of coating materials, adhesives ~~or~~and sealing compounds.
11. (Currently Amended) ~~The use as claimed in claim 10, wherein the A coating material as claimed in claim 10 comprising is used as one of~~ a clearcoat material, and/or as a color and/or effect coating material, for producing clearcoats, single-coat and/or multicoat, color and/or effect, electrically conductive, magnetically shielding and/or fluorescent coatings and combination effect coats.
12. (Canceled)
13. (Currently Amended) A process for preparing a powder slurry curable thermally and with actinic radiation, as claimed in ~~any of claims 1 to 9~~claim 1, by means of a secondary dispersion process, which comprises the following steps:
 - (I) emulsifying an organic solution comprising the constituents (A), (B) and (C) and also, where appropriate optionally, (D), to give an emulsion of the oil-in-water type,

- (II) removing the organic solvent or solvents, and
- (III) replacing all or some of the volume of solvent removed by water, to give the powder slurry.

REMARKS

Upon entry of the preliminary amendment, claims 1-11 and 13 are pending in the application. Claim 12 has been canceled without prejudice. The claims have been amended to comport with U.S. Patent Office regulations. Examination of the claims is respectfully requested.

Respectfully submitted,

Anne G. Sabourin, Esq.
